

Report On Phase-1 Project Work

Revanth M
Software Engineer
Dover India Private Limited

ACKNOWLEDGEMENT

I'm extremely grateful to get trained under "SimplyLearn" as I have gained immense knowledge on the Project-1 Training accessed through Instructor Kiran on C-sharp, Agile Scrum Concepts, Data Structures and OOPS Concepts.

This project has made me to gain much more knowledge on the C-Sharp Programming as this involves something out of the box to think and implement Logic.

DECLARATION

The Project embodied is hereby solely done by me, This is a genuine work and is no where related to any external works.

Revanth M

20th August 2021

REPORT CONTENTS:

1. Problem Statement
2. Problem Logic
3. Results

PROBLEM STATEMENT

Given a text file containing the Records of Teachers, Perform the below 5 Operations on the text-file using a Console Window Application (based on C# Concepts)

1. Read the Text File and Display on the Console.
2. Add the Data to the text file by taking the details from the user.
3. Delete The specific Teacher Data by taking ID as the input from the user.
4. Get the particular Teacher Information by Taking ID as the Input parameter.
5. Update the specific teacher ID by taking the input from the user.

PROBLEM LOGIC

I have implemented the working Logic as following.

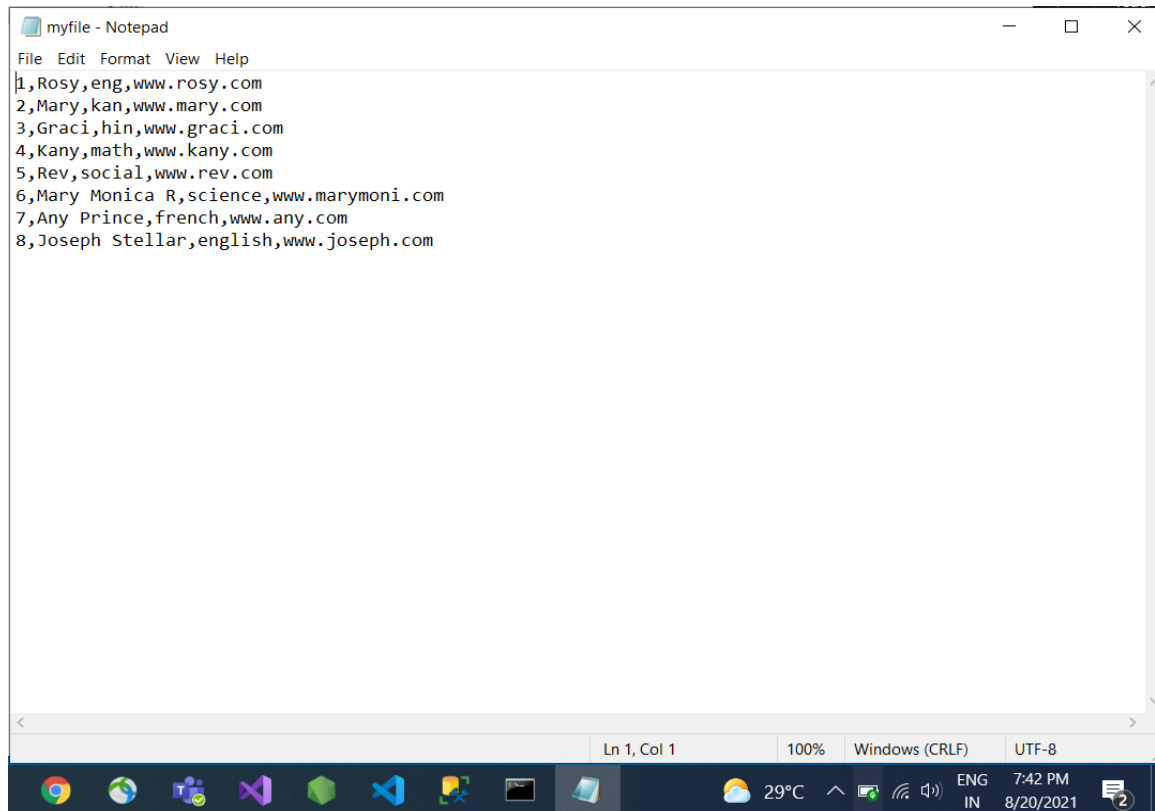

1. Use While Loop to switch between operations and perform specific task based on input.
2. Data on the Text file is as the format (Id,TeacherName,Subject,Address),To implement File operations=> use System.IO to install assembly references.
3. To Read from the file, I have used File.ReadAllLines method that returns string array which contains all lines of the file and create a new list.
 - Split lines using split method in the newly created lists by iterating through each item using a foreach loop.
 - Exceptions occur if number of elements in the line moves beyond 4 entries, so implement a try catch block and then inside the loop console log details.
4. To Add the Details using command prompt, Get the details from the user and use File.AppendAllLines method to insert the data at the EOF.
5. To Delete the particular data based on the entry,I have created a new List, wherein at the beginning, we ReadAllLines from the text file.
 - Iterate using the foreach loop, and using if block when the first entry matches the given id=do nothing and in remaining cases just write the contents into a newly created list and use File.WriteAllLines method to perform on the text file.
6. To Get the teacher data by ID, do same operation as before in point 5, except that when the first entry matches the given id, just console log the data in that line.
7. To Update the Data, create a new list and call ReadAllLines method and store it, if the entry matches the 1st entry of data, Then ask for remaining details and overwrite the existing details and then use File.WriteAllLines,If not matches, Then put the data into the newly created list and use the same method.

RESULTS

The Corresponding Code is available Here please check.

The following are the snapshots of my work along with explanation.

1) Initial Record of the Teacher Data.

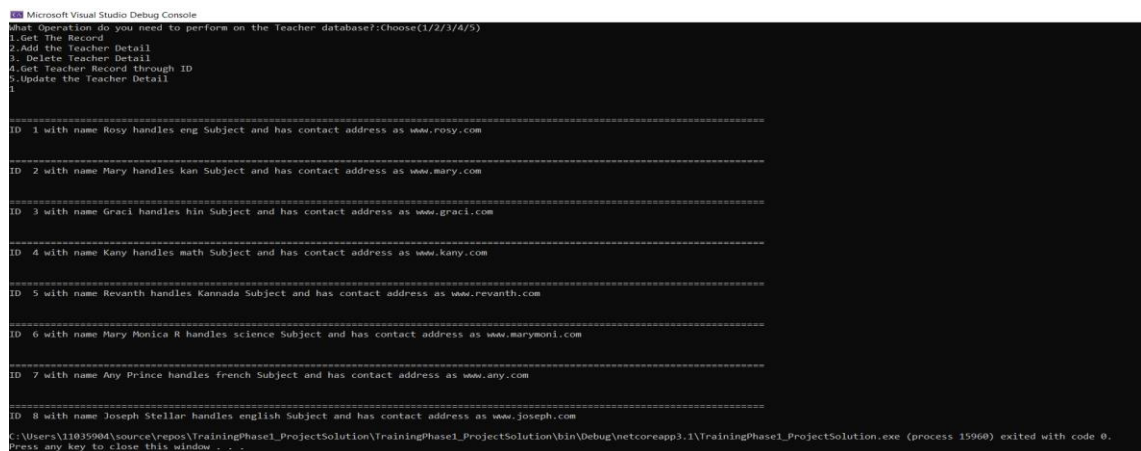

```
myfile - Notepad
File Edit Format View Help
1, Rosy, eng, www.rosy.com
2, Mary, kan, www.mary.com
3, Graci, hin, www.graci.com
4, Kany, math, www.kany.com
5, Rev, social, www.rev.com
6, Mary Monica R, science, www.marymoni.com
7, Any Prince, french, www.any.com
8, Joseph Stellar, english, www.joseph.com

Ln 1, Col 1 100% Windows (CRLF) UTF-8
```

Figure 1: Initial File Contents.

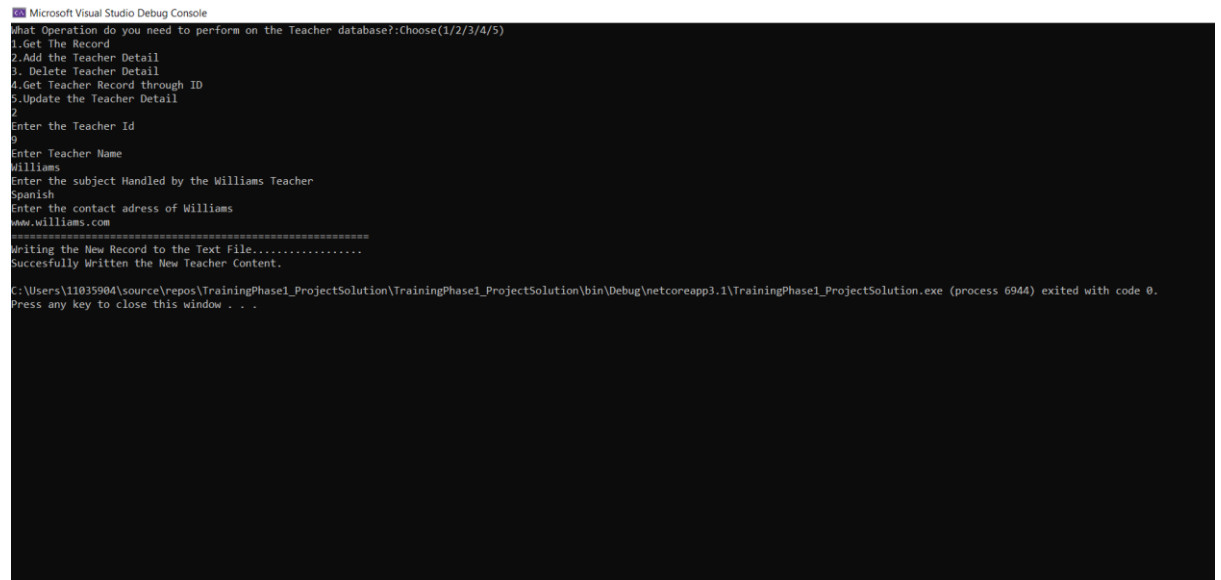

2) Reading from the file and displaying on the Console Window.

```
Microsoft Visual Studio Debug Console
What Operation do you need to perform on the Teacher database?: Choose(1/2/3/4/5)
1. Get The Record
2. Add the Teacher Detail
3. Delete Teacher Detail
4. Get Teacher Record through ID
5. Update the Teacher Detail
6
=====
ID 1 with name Rosy handles eng Subject and has contact address as www.rosy.com
=====
ID 2 with name Mary handles kan Subject and has contact address as www.mary.com
=====
ID 3 with name Graci handles hin Subject and has contact address as www.graci.com
=====
ID 4 with name Kany handles math Subject and has contact address as www.kany.com
=====
ID 5 with name Revanth handles Kannada Subject and has contact address as www.revanth.com
=====
ID 6 with name Mary Monica R handles science Subject and has contact address as www.marymoni.com
=====
ID 7 with name Any Prince handles french Subject and has contact address as www.any.com
=====
ID 8 with name Joseph Stellar handles english Subject and has contact address as www.joseph.com
=====
C:\Users\11035904\source\repos\TrainingPhase1_ProjectSolution\TrainingPhase1_ProjectSolution\bin\Debug\netcoreapp3.1\TrainingPhase1_ProjectSolution.exe (process 15960) exited with code 0.
Press any key to close this window . . .
```

Figure2: As reference to Figure1. Console Window output is shown here.

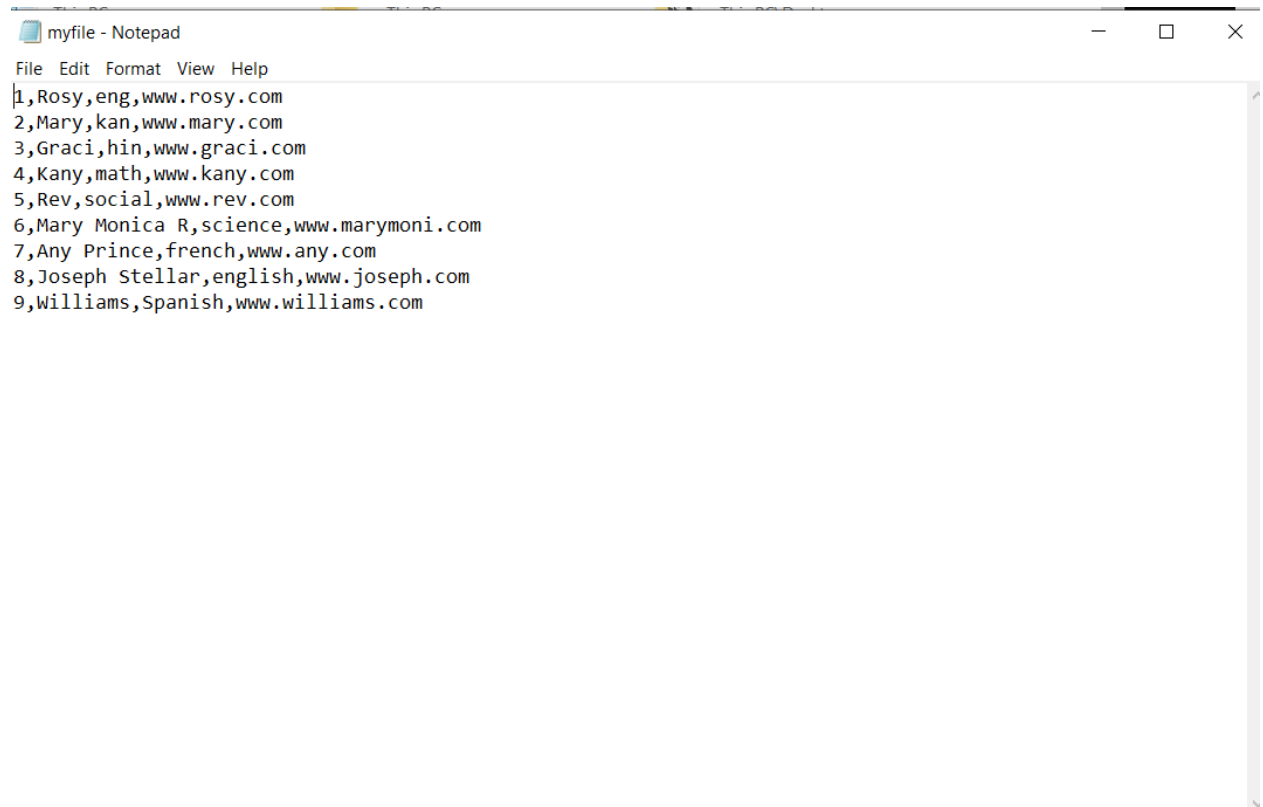

2.Adding Teacher Detail

```

Microsoft Visual Studio Debug Console
What operation do you need to perform on the Teacher database?:Choose(1/2/3/4/5)
1.Get the Record
2.Add the Teacher Detail
3. Delete Teacher Detail
4.Get Teacher Record through ID
5.Update the Teacher Detail
2
Enter the Teacher Id
9
Enter Teacher Name
Williams
Enter the subject Handled by the Williams Teacher
Spanish
Enter the contact address of Williams
www.williams.com
Writing the New Record to the Text File.....
Successfully Written the New Teacher Content.
C:\Users\11035904\source\repos\TrainingPhase1_ProjectSolution\TrainingPhase1_ProjectSolution\bin\Debug\netcoreapp3.1\TrainingPhase1_ProjectSolution.exe (process 6944) exited with code 0.
Press any key to close this window . . .
  
```

Figure 3: User Added a new entry through command prompt.

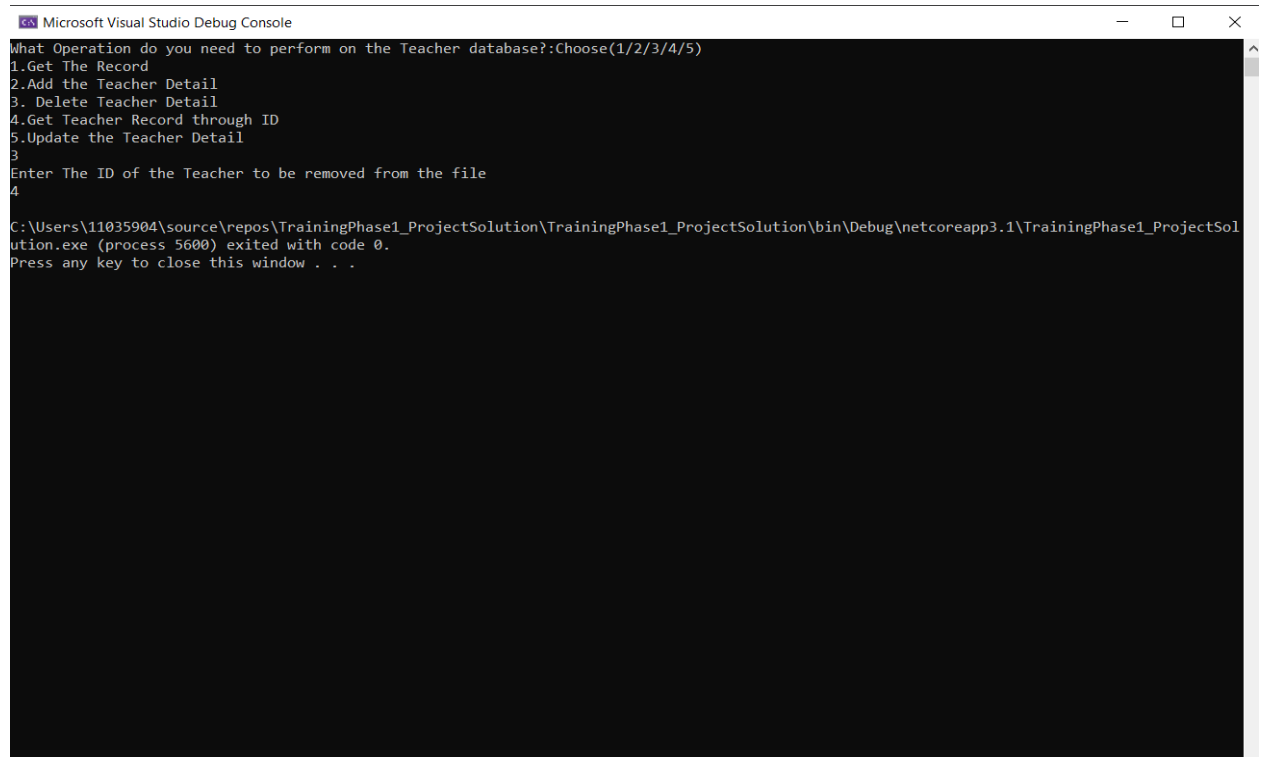

```

myfile - Notepad
File Edit Format View Help
1,Rosy,eng,www.rosy.com
2,Mary,kan,www.mary.com
3,Graci,hin,www.graci.com
4,Kany,math,www.kany.com
5,Rev,social,www.rev.com
6,Mary Monica R,science,www.marymoni.com
7,Any Prince,french,www.any.com
8,Joseph Stellar,english,www.joseph.com
9,Williams,Spanish,www.williams.com
  
```

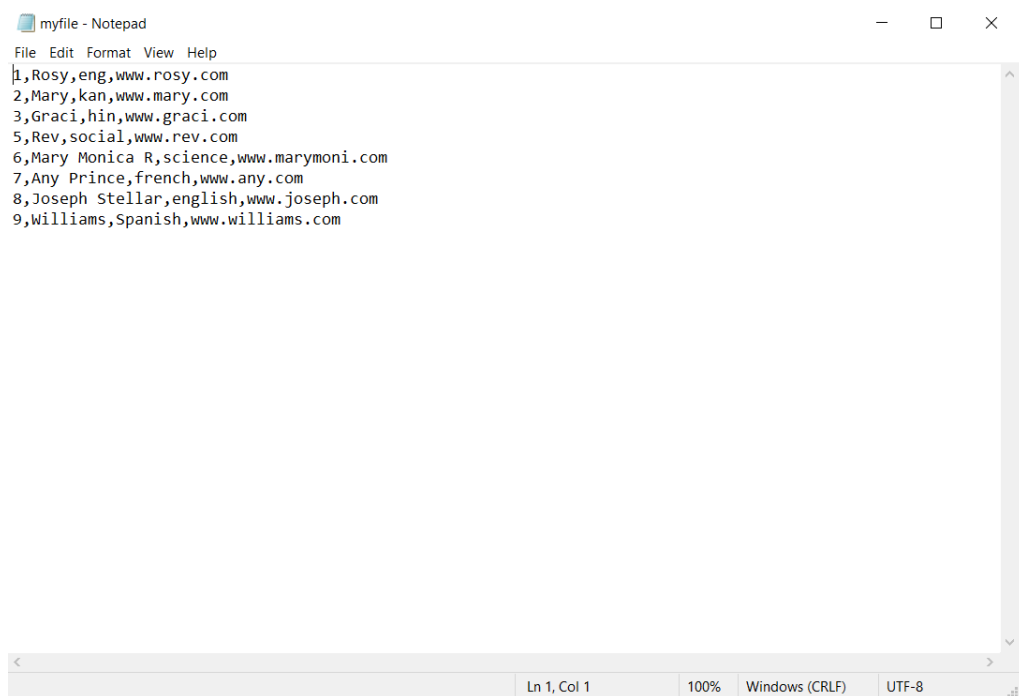

Figure4: After the execution of adding detail, File shows up like this

3.Deleting the teacher data based on the Id is shown here

```
Microsoft Visual Studio Debug Console
What Operation do you need to perform on the Teacher database?:Choose(1/2/3/4/5)
1.Get The Record
2.Add the Teacher Detail
3. Delete Teacher Detail
4.Get Teacher Record through ID
5.Update the Teacher Detail
3
Enter The ID of the Teacher to be removed from the file
4
C:\Users\11035904\source\repos\TrainingPhase1_ProjectSolution\TrainingPhase1_ProjectSolution\bin\Debug\netcoreapp3.1\TrainingPhase1_ProjectSolution.exe (process 5600) exited with code 0.
Press any key to close this window . . .
```

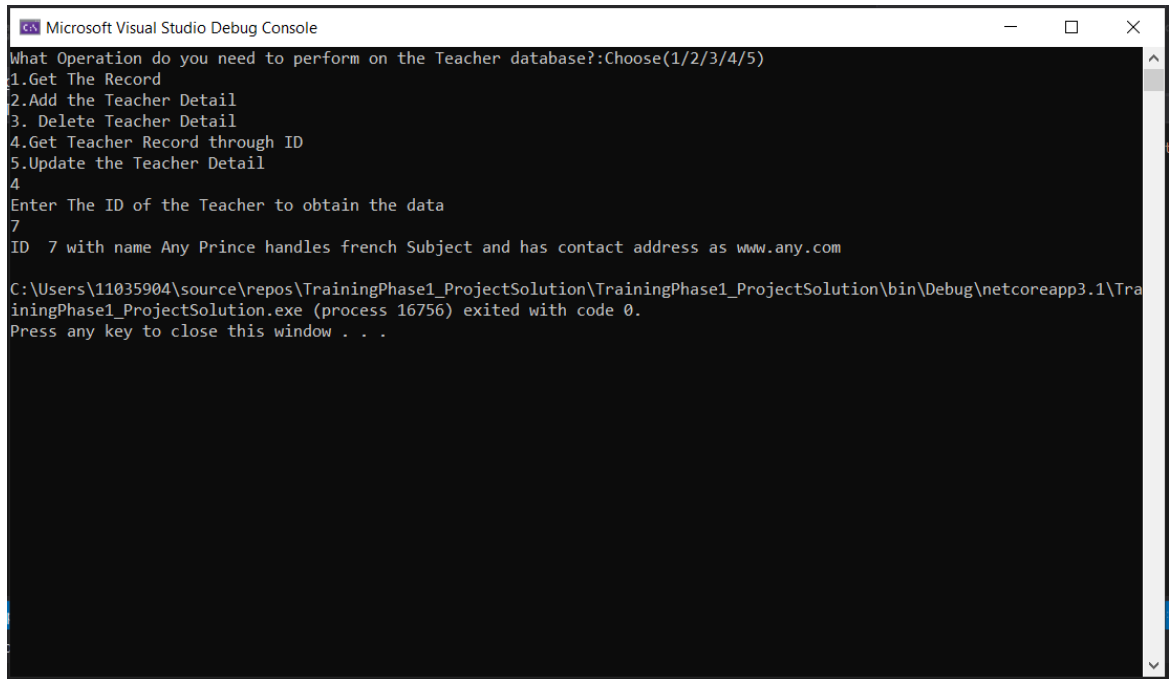

Figure5: Command Prompt operations on Deletion

```
myfile - Notepad
File Edit Format View Help
1,Rosy,eng,www.rosy.com
2,Mary,kan,www.mary.com
3,Graci,hin,www.graci.com
5,Rev,social,www.rev.com
6,Mary Monica R,science,www.marymoni.com
7,Any Prince,french,www.any.com
8,Joseph Stellar,english,www.joseph.com
9,Williams,Spanish,www.williams.com
```

Figure6: Contents after Deletion of the ID=4 entered by the User and text file looks like this with reference to figure 4

4. Getting Teacher Data through Id

```

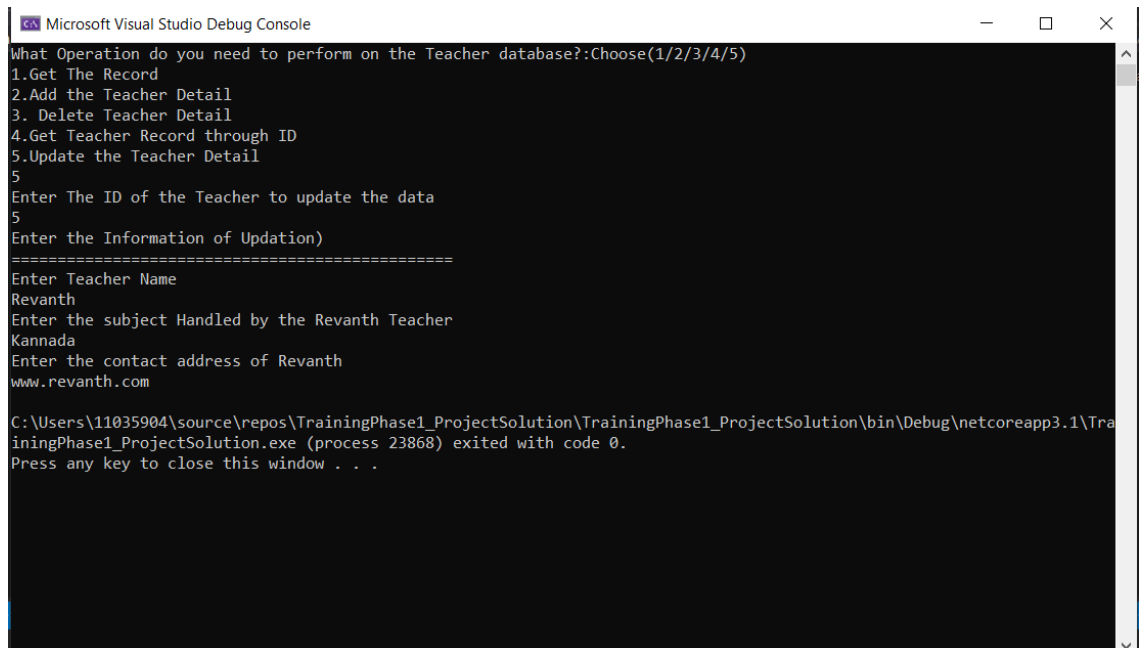

Microsoft Visual Studio Debug Console
What Operation do you need to perform on the Teacher database?:Choose(1/2/3/4/5)
1.Get The Record
2.Add the Teacher Detail
3. Delete Teacher Detail
4.Get Teacher Record through ID
5.Update the Teacher Detail
4
Enter The ID of the Teacher to obtain the data
7
ID 7 with name Any Prince handles french Subject and has contact address as www.any.com

C:\Users\11035904\source\repos\TrainingPhase1_ProjectSolution\TrainingPhase1_ProjectSolution\bin\Debug\netcoreapp3.1\TrainingPhase1_ProjectSolution.exe (process 16756) exited with code 0.
Press any key to close this window . . .

```

Figure 7: With reference to figure 6 now, the data corresponding to ID=7 entered by the user is shown like this.

5.Updating the Teacher data

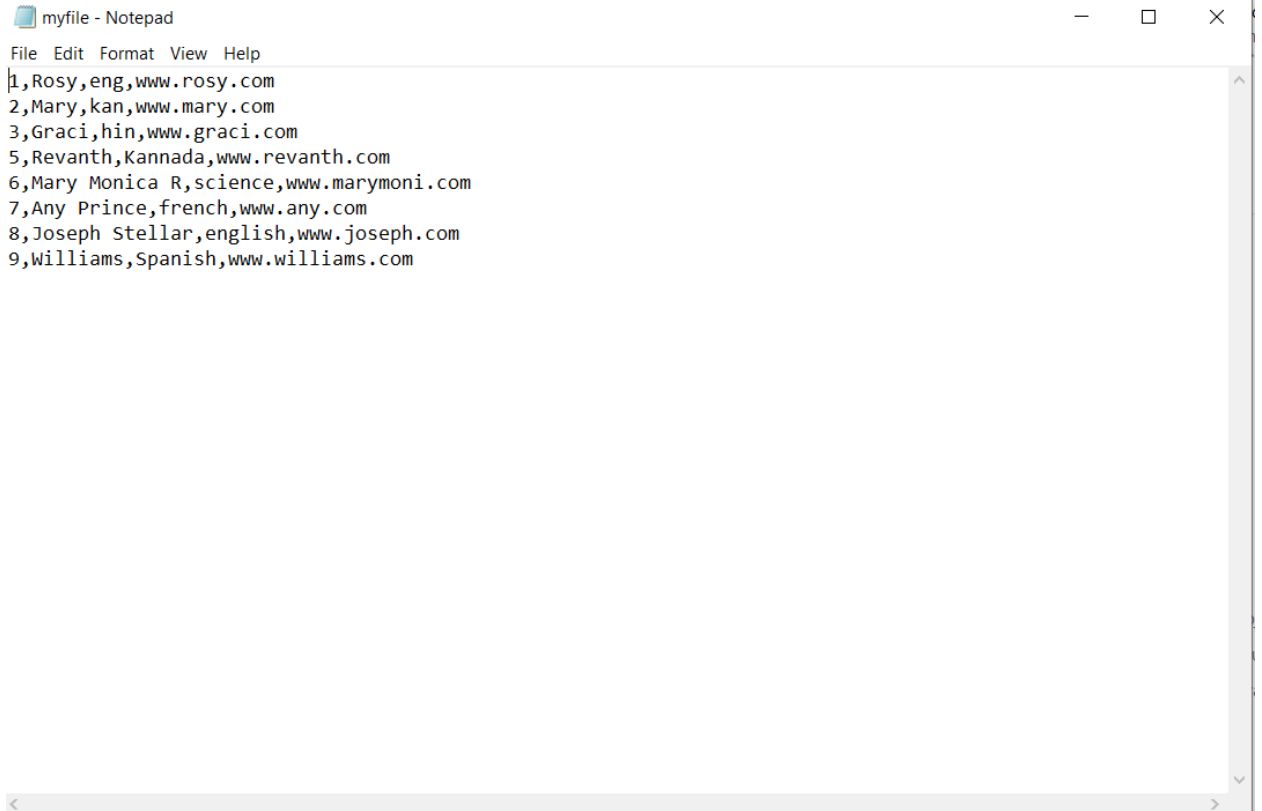

```

Microsoft Visual Studio Debug Console
What Operation do you need to perform on the Teacher database?:Choose(1/2/3/4/5)
1.Get The Record
2.Add the Teacher Detail
3. Delete Teacher Detail
4.Get Teacher Record through ID
5.Update the Teacher Detail
5
Enter The ID of the Teacher to update the data
5
Enter the Information of Updation)
=====
Enter Teacher Name
Revanth
Enter the subject Handled by the Revanth Teacher
Kannada
Enter the contact address of Revanth
www.revanth.com

C:\Users\11035904\source\repos\TrainingPhase1_ProjectSolution\TrainingPhase1_ProjectSolution\bin\Debug\netcoreapp3.1\TrainingPhase1_ProjectSolution.exe (process 23868) exited with code 0.
Press any key to close this window . . .

```

Figure8: User entered to edit Id=5, and the command prompt is shown like this.

The screenshot shows a Notepad window with the title 'myfile - Notepad'. The menu bar includes 'File', 'Edit', 'Format', 'View', and 'Help'. The text area contains a list of nine entries, each consisting of an ID, a name, a language, and a website URL. The entries are as follows:

ID	Name	Language	Website
1	Rosy	eng	www.rosy.com
2	Mary	kan	www.mary.com
3	Graci	hin	www.graci.com
5	Revanth	Kannada	www.revanth.com
6	Mary Monica R	science	www.marymoni.com
7	Any Prince	french	www.any.com
8	Joseph Stellar	english	www.joseph.com
9	Williams	Spanish	www.williams.com

Figure 9: Compare figure 6, We observe the updating of the teacher data.

END OF PROJECT

THANKING YOU

Revanth M.
